IN THE SPECIFICATION

Page 10, beginning at line 12, please replace the paragraph as follows:

--It is another object of the present invention to make it possible to take out and carry a substrate with a film having been formed by sputtering efficiently at a high speed in an apparatus used for forming a film by closely contacting at least one portion of a rear surface of a section of an optical disk substrate in which a thin film is formed during film formation by sputtering to [s] a substrate holder.--

Page 23, beginning at line 17, please replace the paragraph as follows:

--Substrate carriage arms 4a to 4f are connected to the substrate holders 6a [t] to 6f, and the substrate carriage arms 4a to 4f are fixed on a central section 30. The central section 30 is rotated by a driving section not shown herein. In association with this rotation, the substrate holders 6a to 6f can successively set one optical disk substrate in the film-formation chambers 2a to 2e.--

Page 25, beginning at line 1, please replace the paragraph as follows:

--The optical disk substrate 1 is fixed by an inner mask 11 and an outer mask 12 to the holder section 3, [a] and a film is formed only in an area S of the optical disk substrate exposing from the inner mask 11 as well as from the outer mask 12 (film-formed area).--
